

GraphQL

- GraphQL is a query language for APIs.
- It allows clients to request only the data they need.
- Developed by Meta (Facebook).
- Helps reduce over-fetching and under-fetching of data.
- Uses a single endpoint for all requests.

REST API vs GraphQL

REST API

- Uses multiple endpoints.
- Fixed response structure.
- Easy to learn and widely used.
- Better for simple applications.

GraphQL

- Uses a single endpoint.
- Client chooses required data.
- More flexible and efficient.
- Better for complex frontend applications.

When to Use REST API

When to Use GraphQL

Industry Demand of GraphQL
